THE ASA DIFFERENCE

Our NextGen Titanium range is the most natural looking decking board on the market. Featuring a durable and lightweight core, each board is capped with a carbonised double protective ASA coating providing unmatched durability against stains, cracking, mould and mildew. Every board is uniquely stunning in appearance and backed by a massive 30 year warranty.

Titanium is capped with 100% Acrylonitrile Styrene Acrylate Copolymer (ASA). Each board contains PVC (50%), CaCO₃ (40%), UV stabiliser & Anti-Mould (10%)

ADVANTAGES OF ASA DECKING MATERIAL

- It's the best weather-resistant resin available.
- It can be built low to the ground.
- ASA is incredibly strong and doesn't stain.
- ASA looks more like natural wood.
- Simple to maintain.
- Does not absorb heat, easy to walk on.
- In-built fade resistance.

GROOVE EDGED SOLID DECKING

Length	5.8 Mtr
Dimension	140mm x 24 mm
LM per SQM	7
Residential Span	350 mm to 400 mm
Commercial Span	300 mm to 350 mm
Slip Rating	P5/R11
Fire Properties	Critical Flux - 11 ku/m ²
Weight	14.5 kg

ASA DECKING VS OTHER CO-EXTRUSION MATERIALS

There are a number of advantages that ASA decking materials provide over the competition, but there's also one important consideration: this decking material is more expensive. In fact, the reason that so many companies offer PVC/ ASA mixtures rather than true 100% ASA decking is to simply reduce costs. For those discerning buyers who want the best of the best, ASA quality cannot be surpassed.

MATCHING FASCIA BOARD

Length	2.8 Mtr
Dimension	150mm x 12 mm
LM per SQM	6.6
Residential Span	N/A
Commercial Span	N/A
Slip Rating	N/A
