THE MOST INCREDIBLE COMPOSITE BOARD IN THE WORLD

Our NextGen Titanium is quite simply the most exquisite weather resistant decking material in the world. Built upon a PVC composite core, our Titanium collection is wrapped in a double protective layer of ASA, a material pioneered by the automobile industry to withstand harsh sun and UV exposure. With BAL 29 bushfire resistant technology and an industry leading R5/P11 surface, this is the ultimate weatherproof material for maximum safety and the ultimate designer finish.

Available in a gorgeous woodgrain or a classical sanded finish our colour range is a direct response to the aesthetic needs of architects and designers - expertly co-extruded onto a stunning Designer 140mm and Ultra 210mm profile designed for a streamlined installation experience.

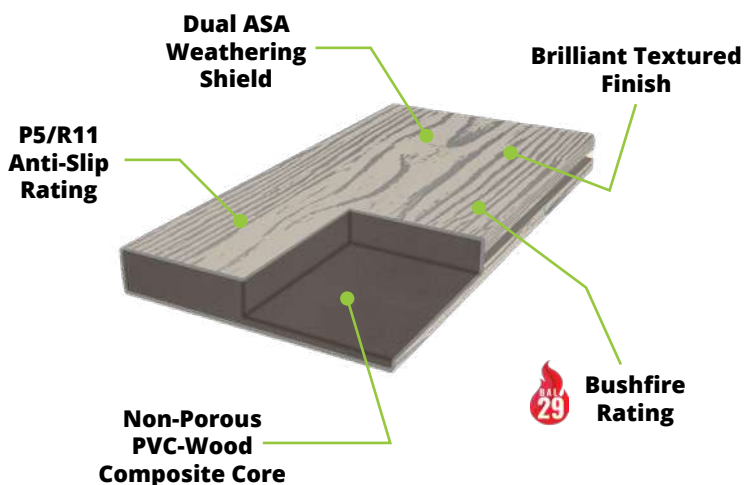

Available in matching Fascia and Edging Boards
